

Company Presentation

PCM-Workshop
12.11.2021

Who are we?

Bjørn M. Holo

Senior technical advisor

M.Sc Mechanical Engineering (NTH)

Working with Marine HVAC since 1992.

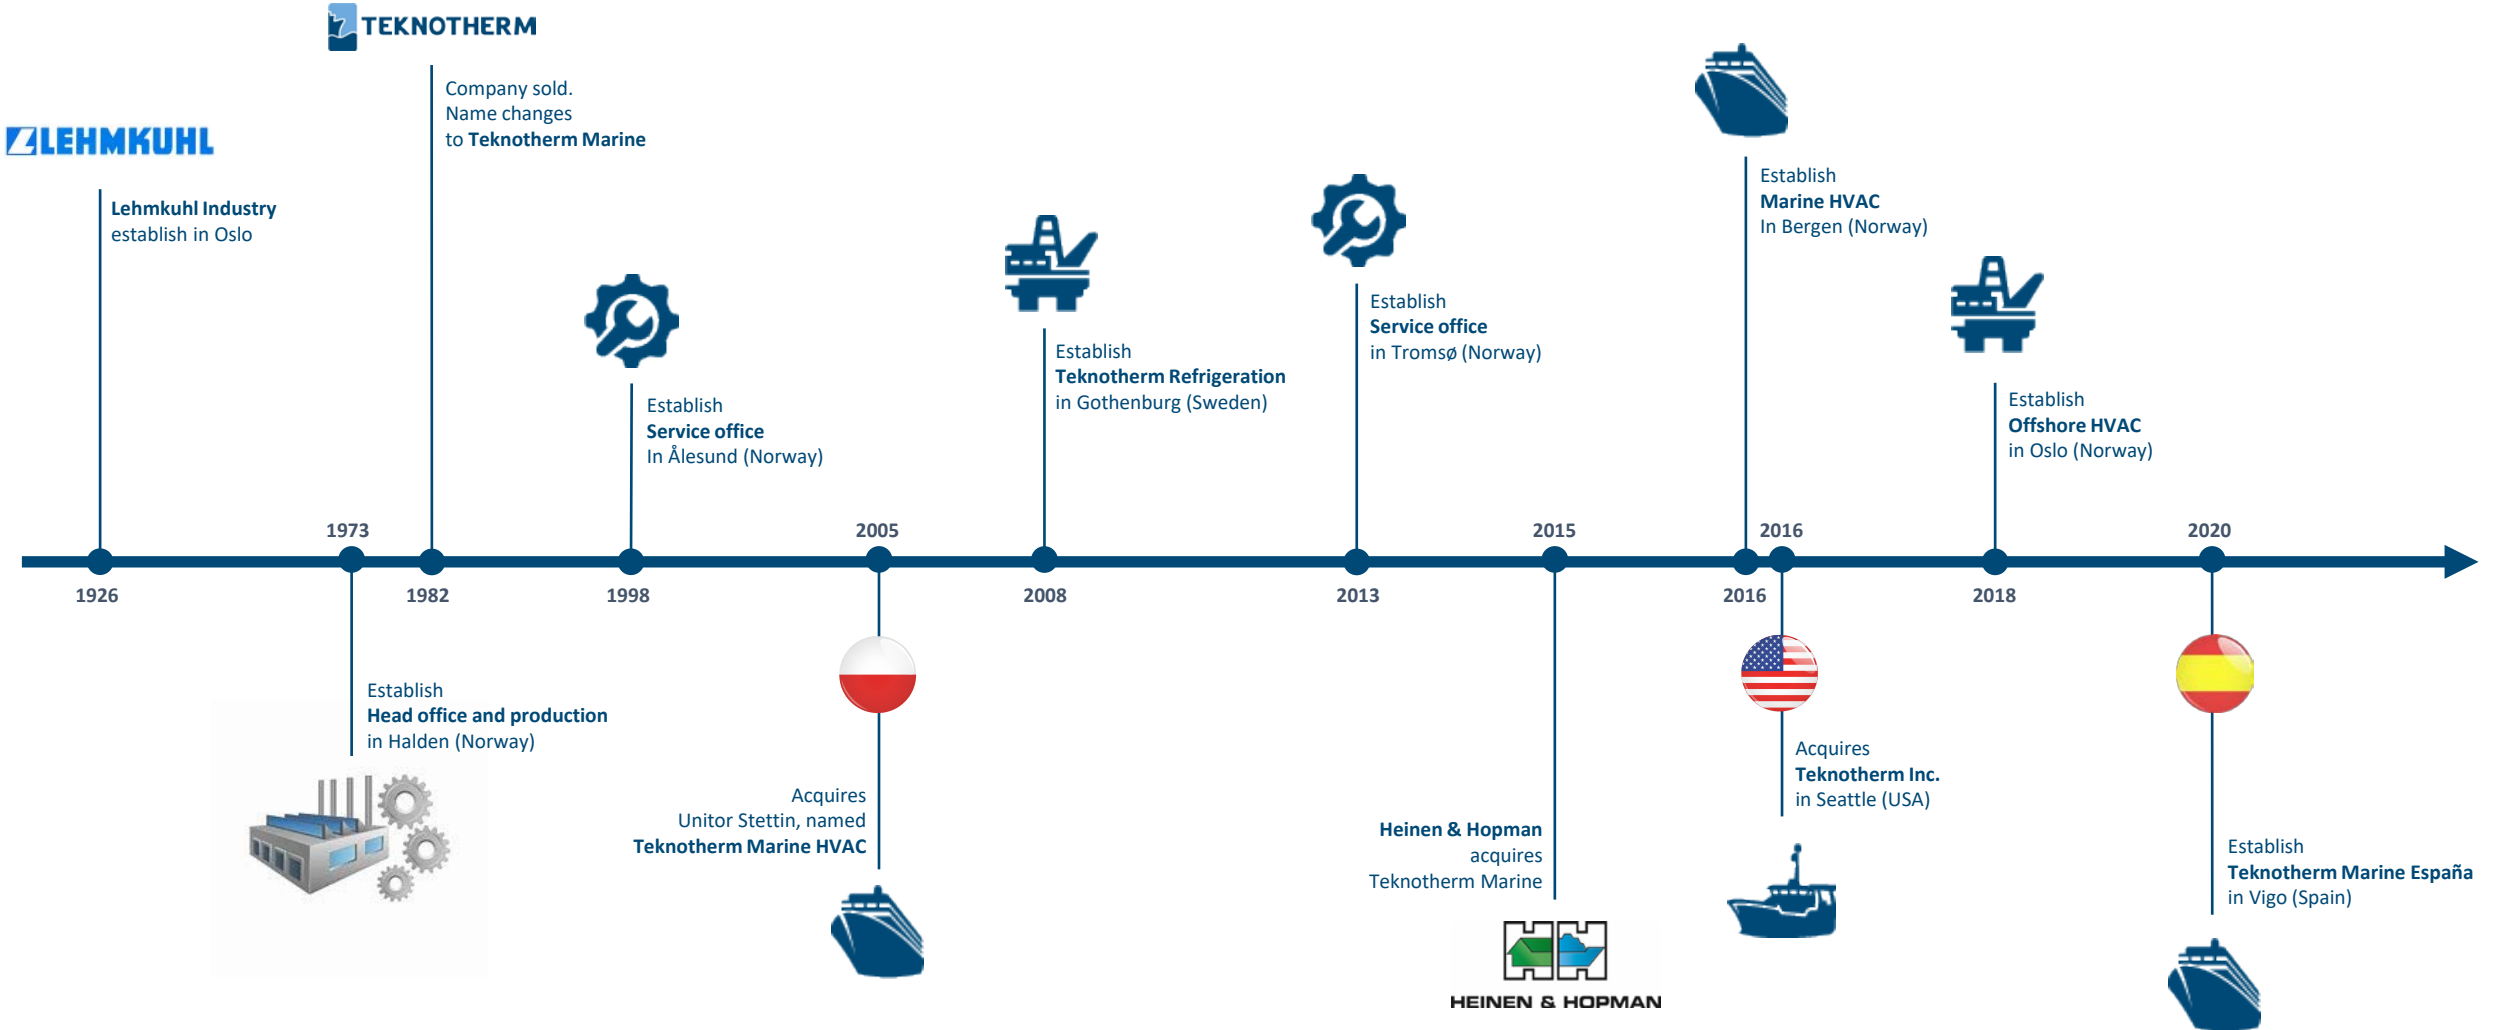

Chris-André Larsen

Technical advisor

M.Sc Energy and Environmental Engineering (NTNU)

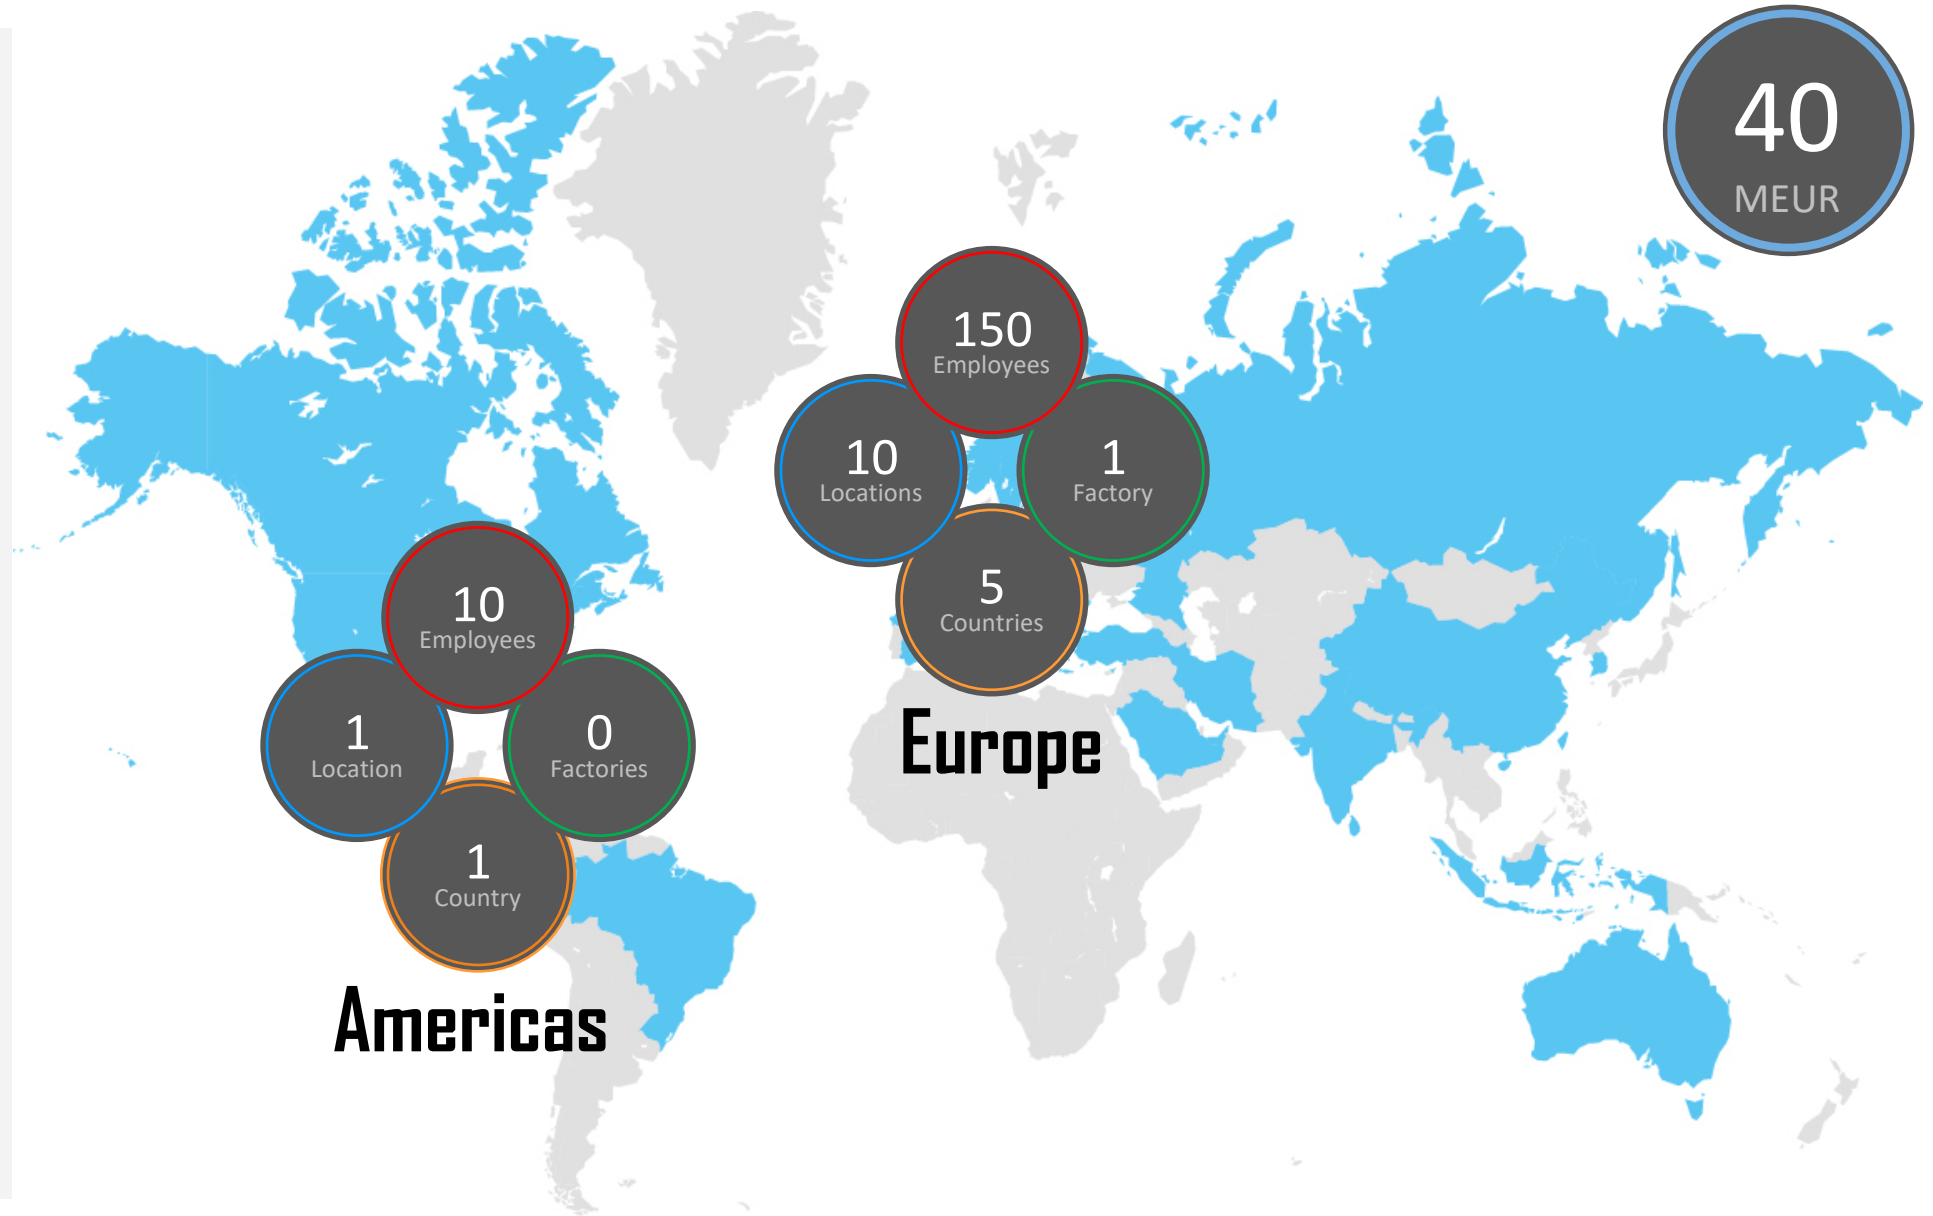

Started with Teknotherm in August

Company history

Locations

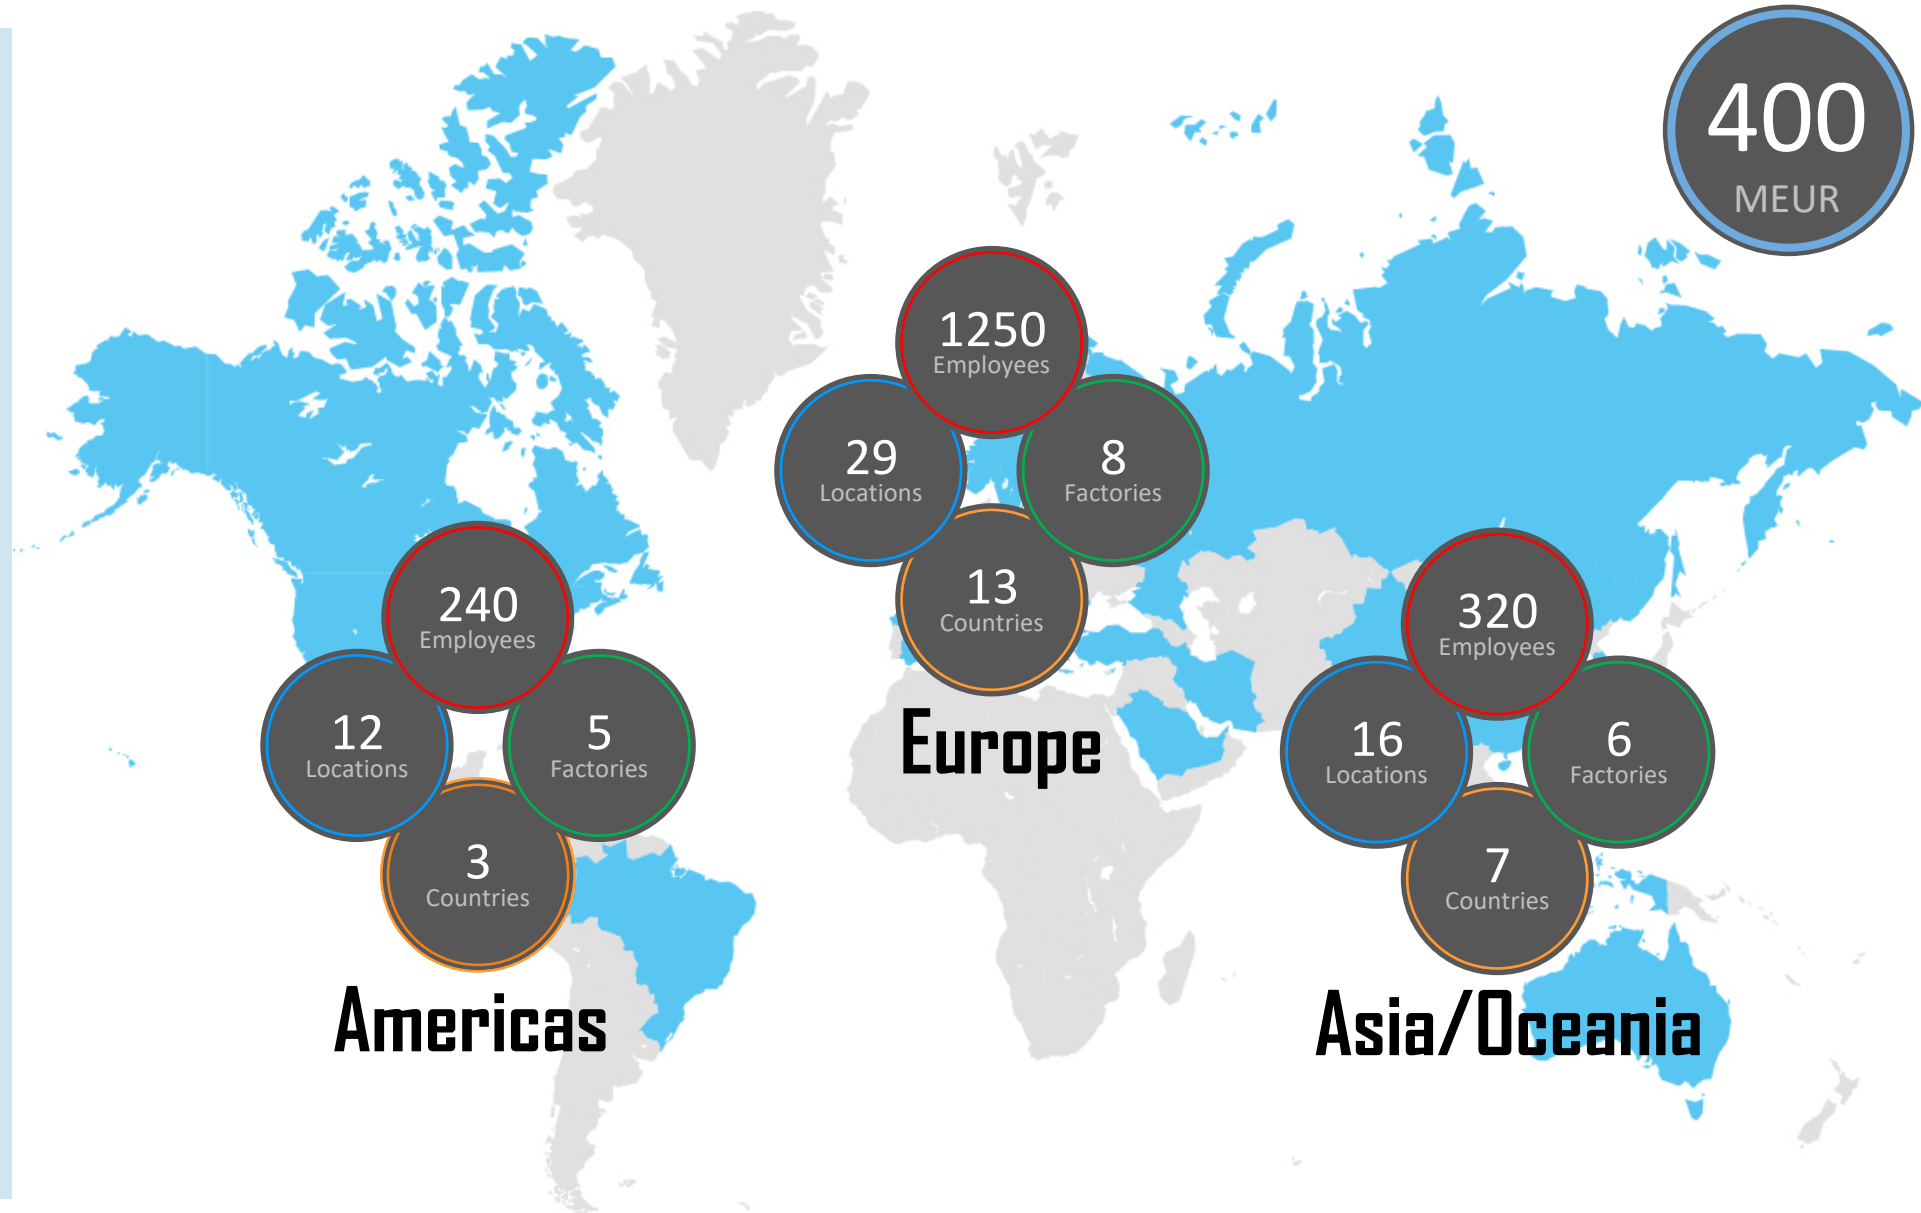

- Halden (Norway)
- Oslo (Norway)
- Bergen (Norway)
- Stettin (Poland)
- Vigo (Spain)
- Gothenburg (Sweden)
- Seattle (USA)
- St. Petersburg (Russia)
- Ålesund (Norway)
- Trondheim (Norway)
- Tromsø (Norway)

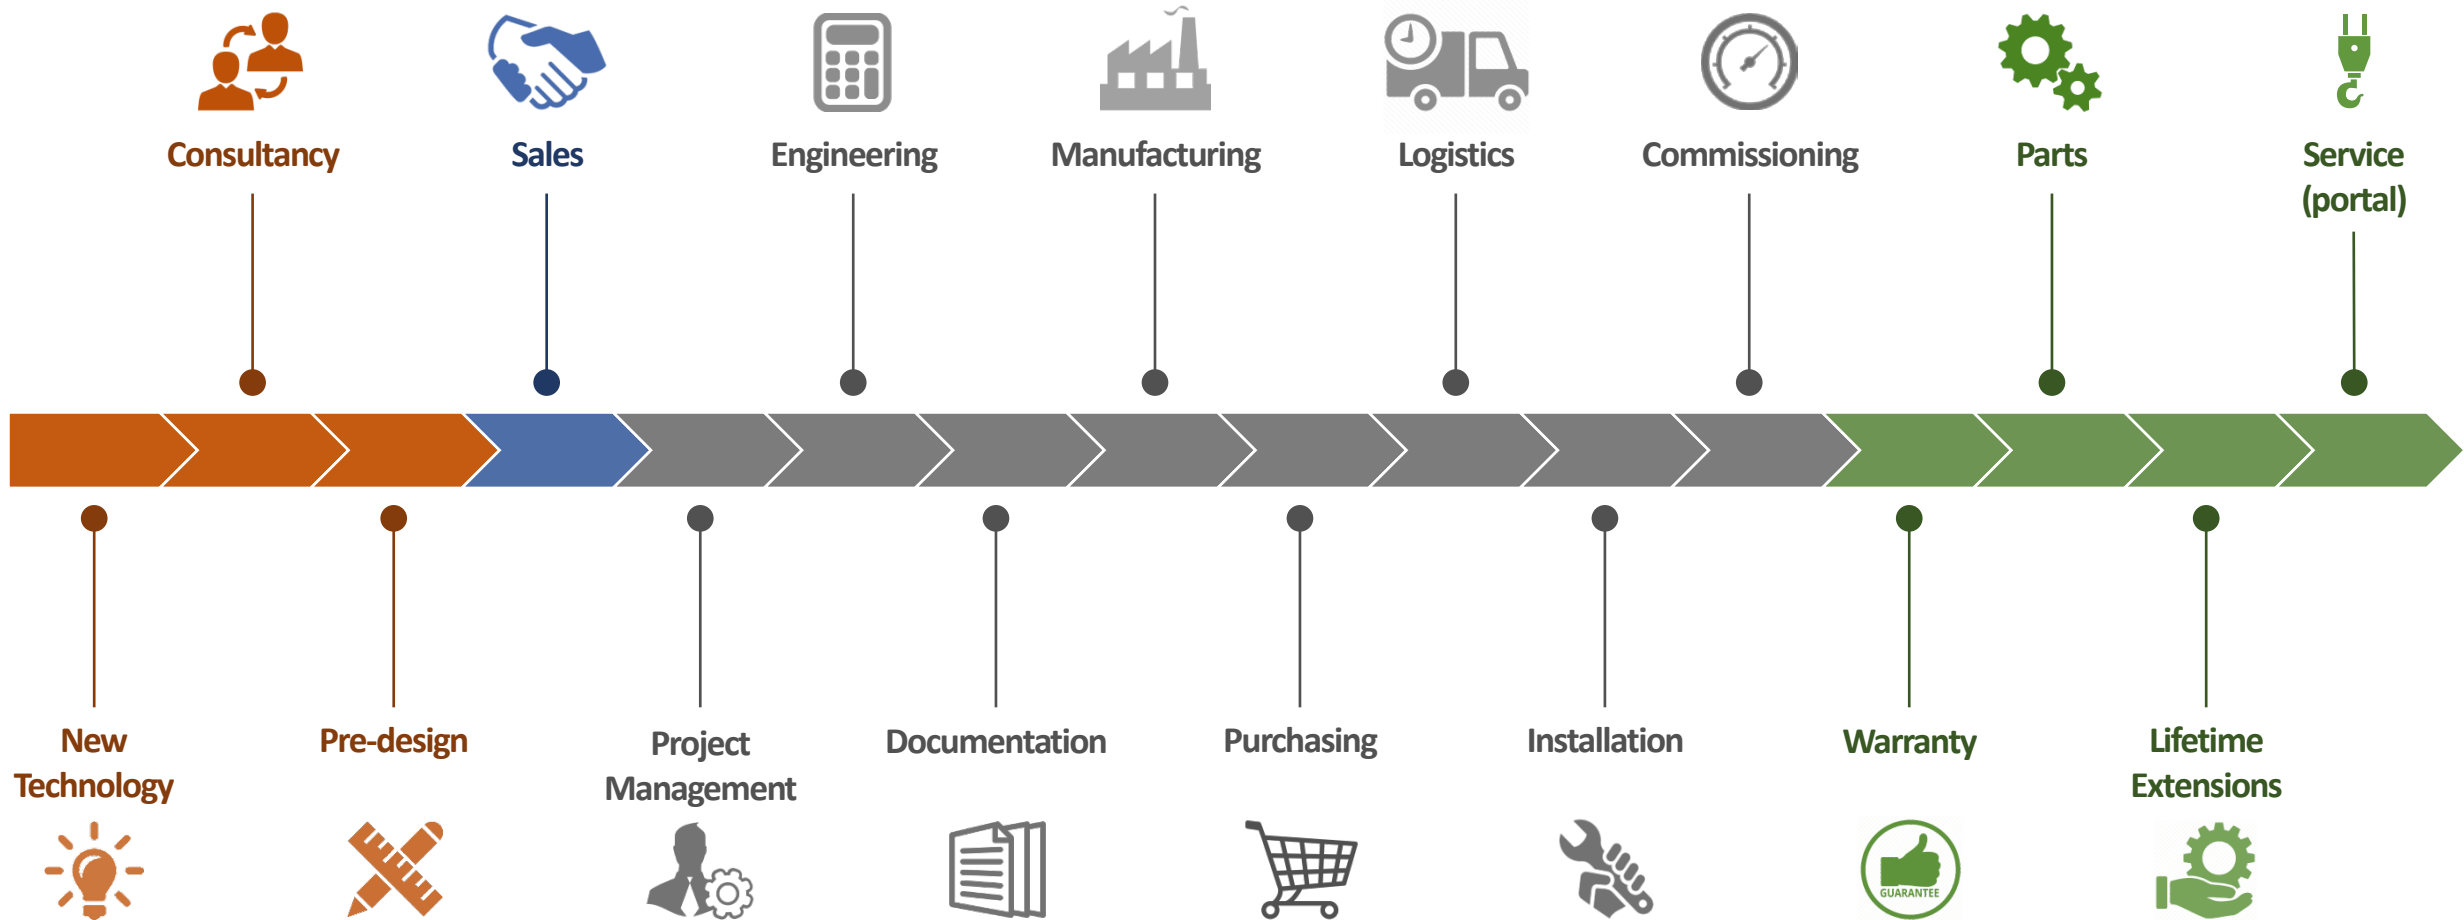

Heinen & Hopman Group

HEINEN & HOPMAN

System responsibility A-Z

References

Cruise Vessels

Hurtigruten 140m / 650pax (2 ships)

Scenic Eclipse 165m / 228pax

Havila Coastal Route 123 m / 640 pax (4 ships)

AraMana 139m / 280pax

Viking River Cruises 135m

Celebrity Flora 101.5m / 100pax

Viking Mississippi 137 m / 386 pax

World Traveller 126 m / 196 pax

Silversea Origin 101.5m/100pax

References

RoPax & Ferries

E-Flexer 212 m / 1200 pax / 120 cars (8 ships)

Color Hybrid 160 m / 2000 pax / 500 cars

Algerie Ferries 200 m / 1800 pax / 600 cars

Staten Island Ferry 97.5 m / 4500 pax (3 ships)

Superstar 230 m / 1100 pax / 5100 Im

TT Line 230 m / 800 pax / 200 trucks

Dover-Calais 230 m / 1500 pax (2 ships)

Aranui 5 126 m / 150 pax

Honfleur 185 m / 1680 pax / 550 cars

References

Special Vessels & Navy

Coast Guard Vessels Norway (3 ships)

Pioneering Spirit 382 x 124 m

Arctic offshore patrol vessel 103.6 m (Canada)

Polar Research Vessel 160 m (Australia)

Windmill Vessels 88 m (6 ships)

Successor Class Submarines 152.9m (UK)

FPSO 200 m

Fishing Vessel 81 m

Battery Ferries 109 m / 399 pax (3 ships)

References

Yachts

Motor Yacht A 119 m

REV Ocean 182 m

Northern Star 107 m

Olivia O 86.5 m

Topaz 147 m

Lady S 93 m

Nord 142 m

Azzam 180 m

Viva 94 m

A large white graphic consisting of a central circle with a thick white border, and two horizontal bars extending from the left and right sides of the circle, creating a stylized 'C' or 'E' shape. The background is a blue-tinted image of ice crystals and water droplets.

PCM

Phase changing materials

Opportunities

- Utilize waste heat
- Capacity equalization
- Reduce installed capacity
- Reduce energy consumption
- Emission free operation in harbours and fjords

Phase changing materials

Challenges

- Limited space
- Low ΔT
- No one fit all solution
- Efficient charging, discharging and utilization

Tustna/Grip

Vessels

- Double ended ferries
- Battery propulsion
- Diesel back up
- 80 cars / 399 Passengers & Crew

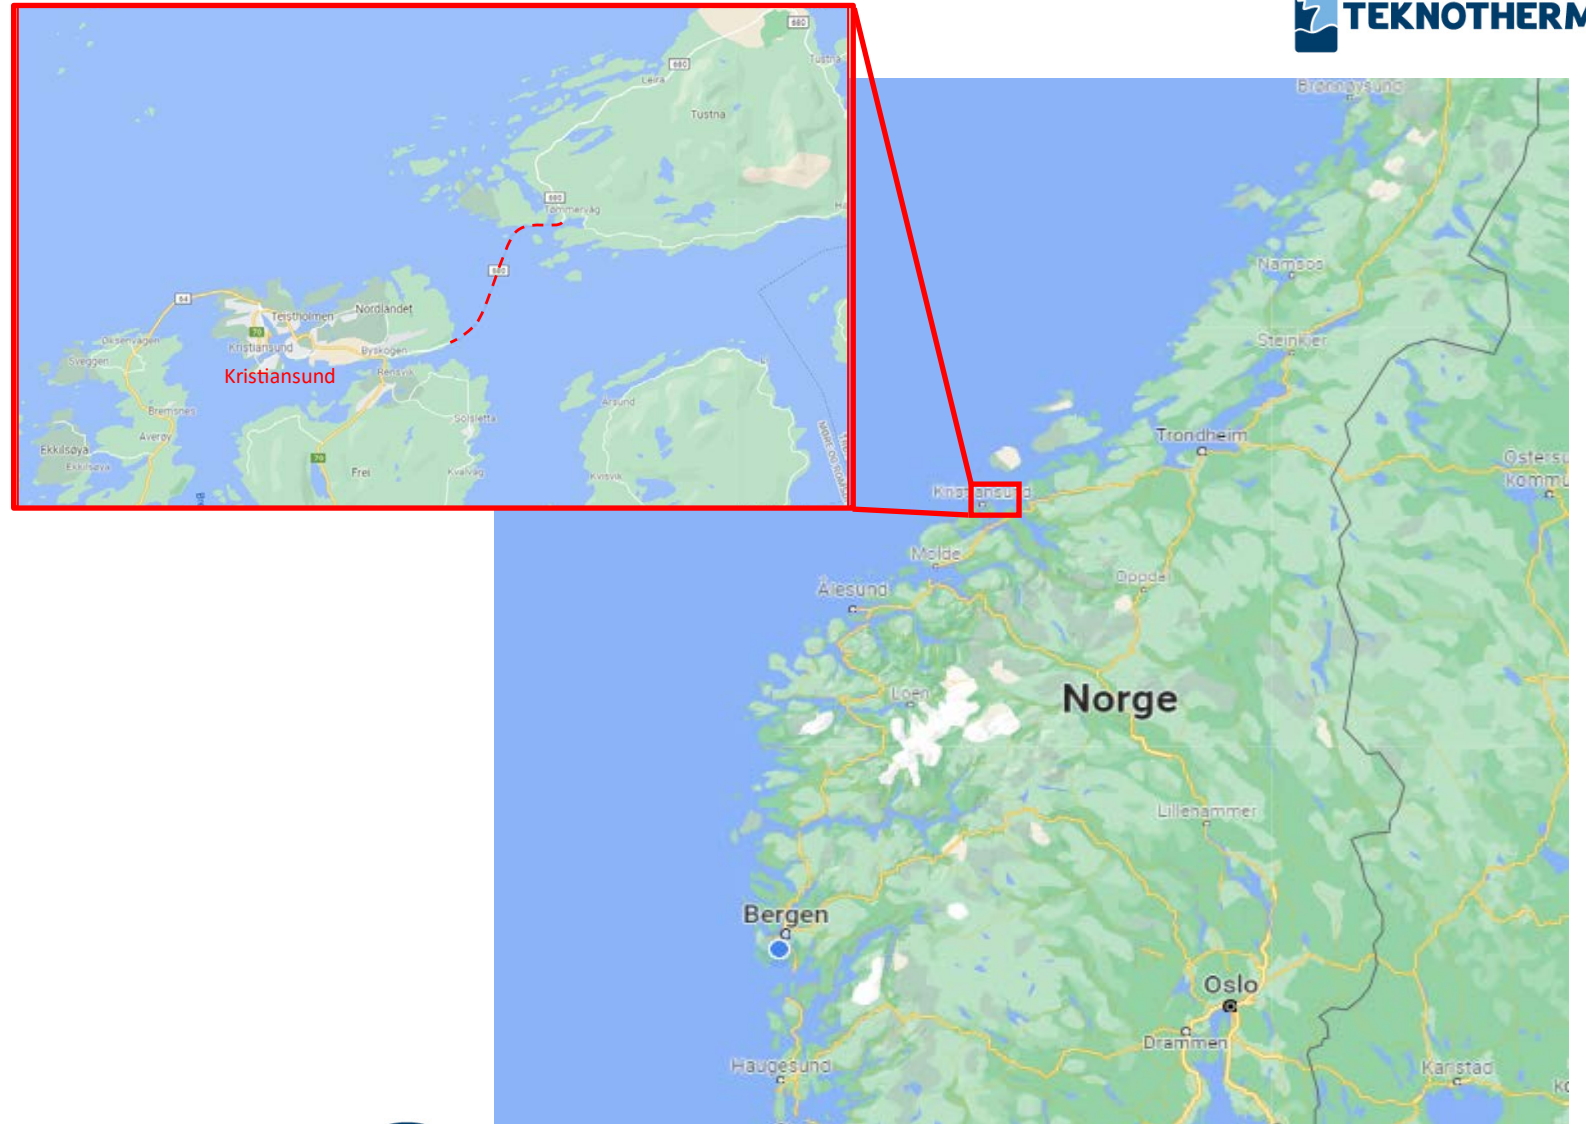

Teknotherm Scope

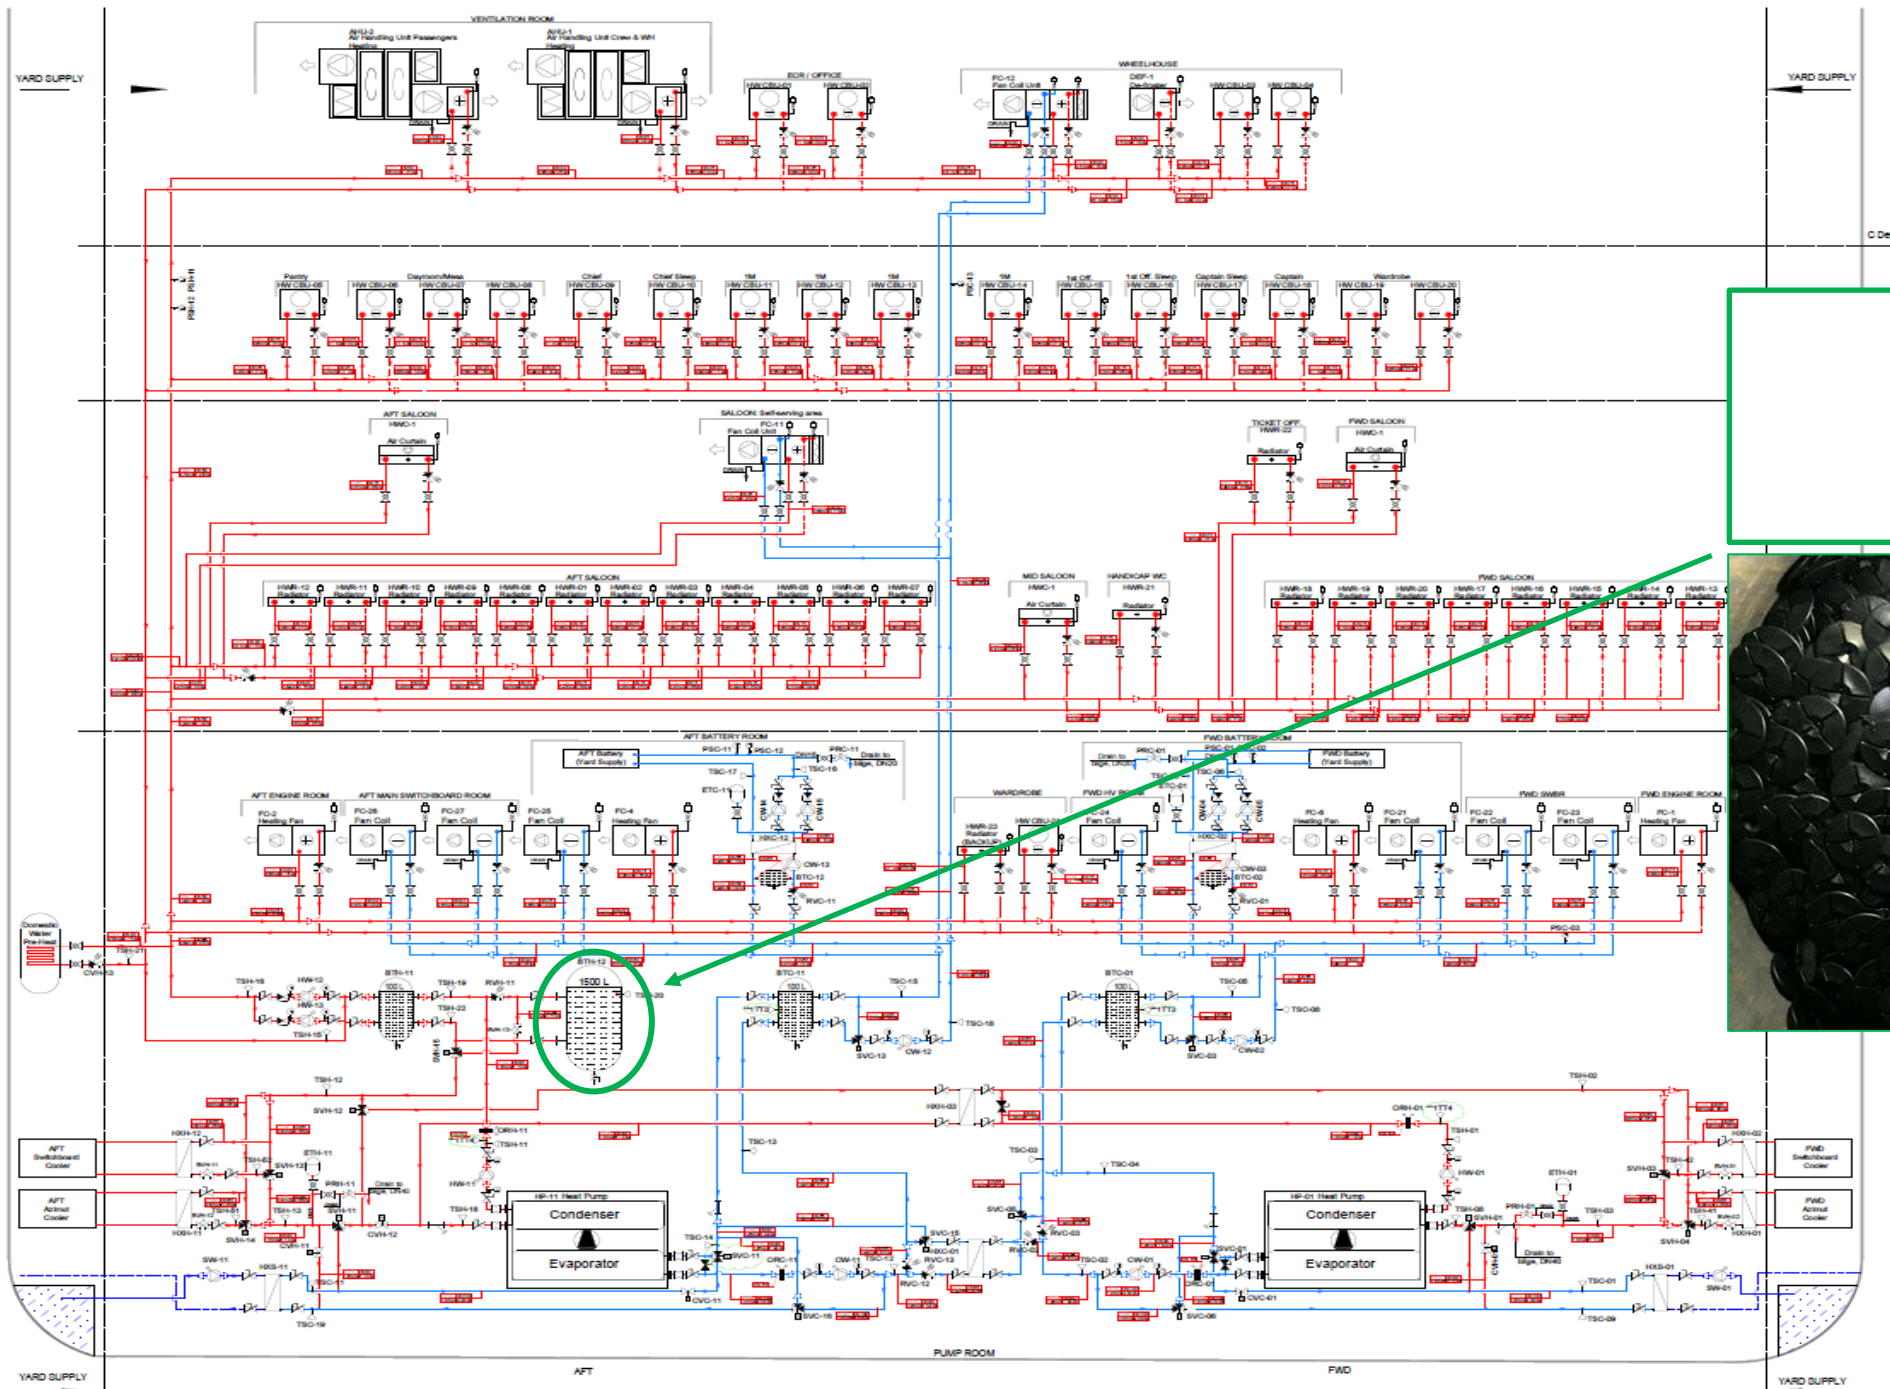

- Ventilation system for accommodation and technical spaces
- Heating and cooling systems
- Control system for HVAC plant
- Engineering, equipment delivery, commissioning

Tustna/Grip

- 25 min crossing
- 4 min battery charging
- 12/18 h operation per day
- Operated by Fjord1
- ~80 electrical ferries in Norway last 8-10 years

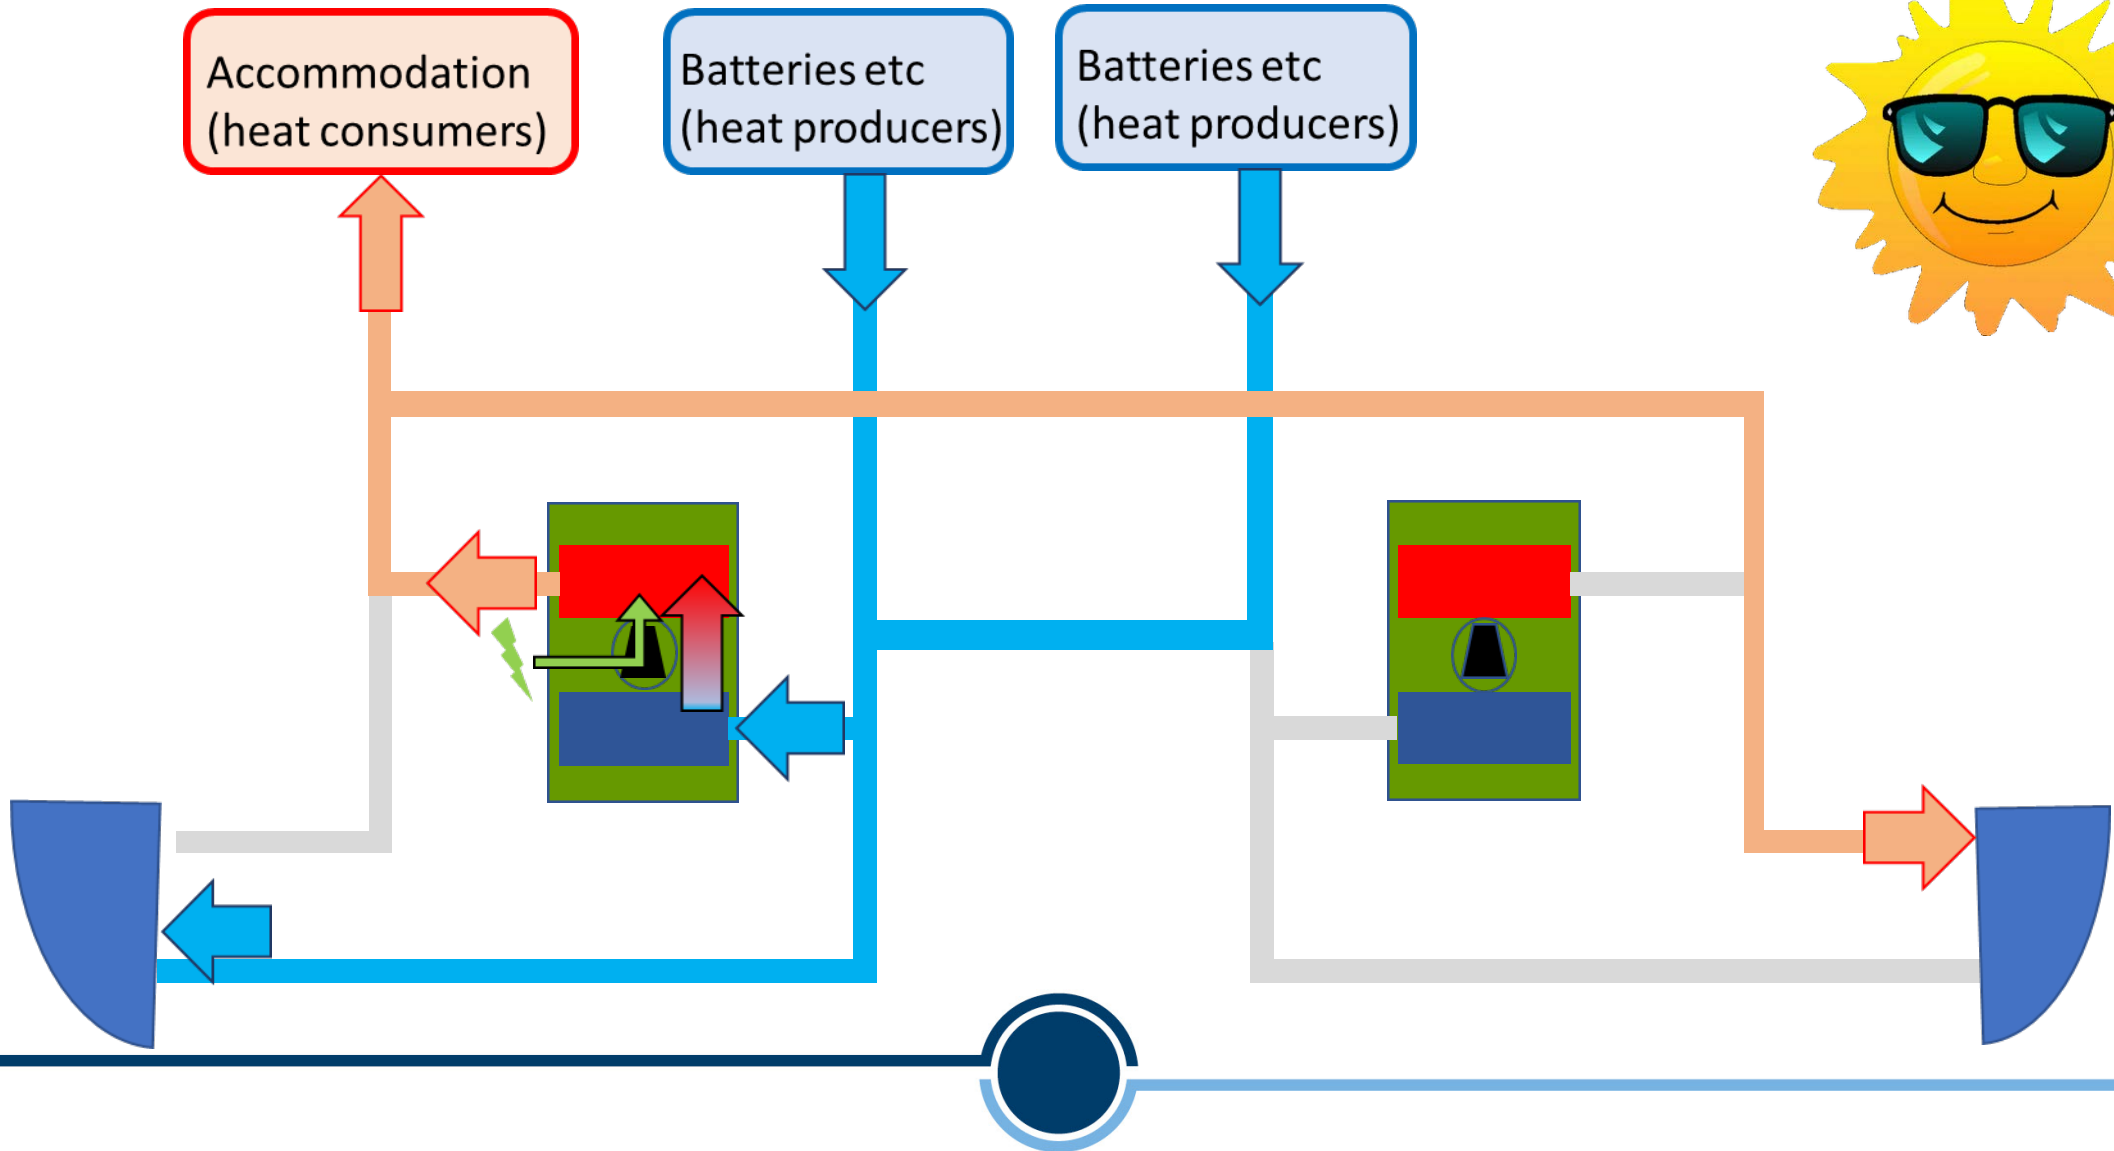

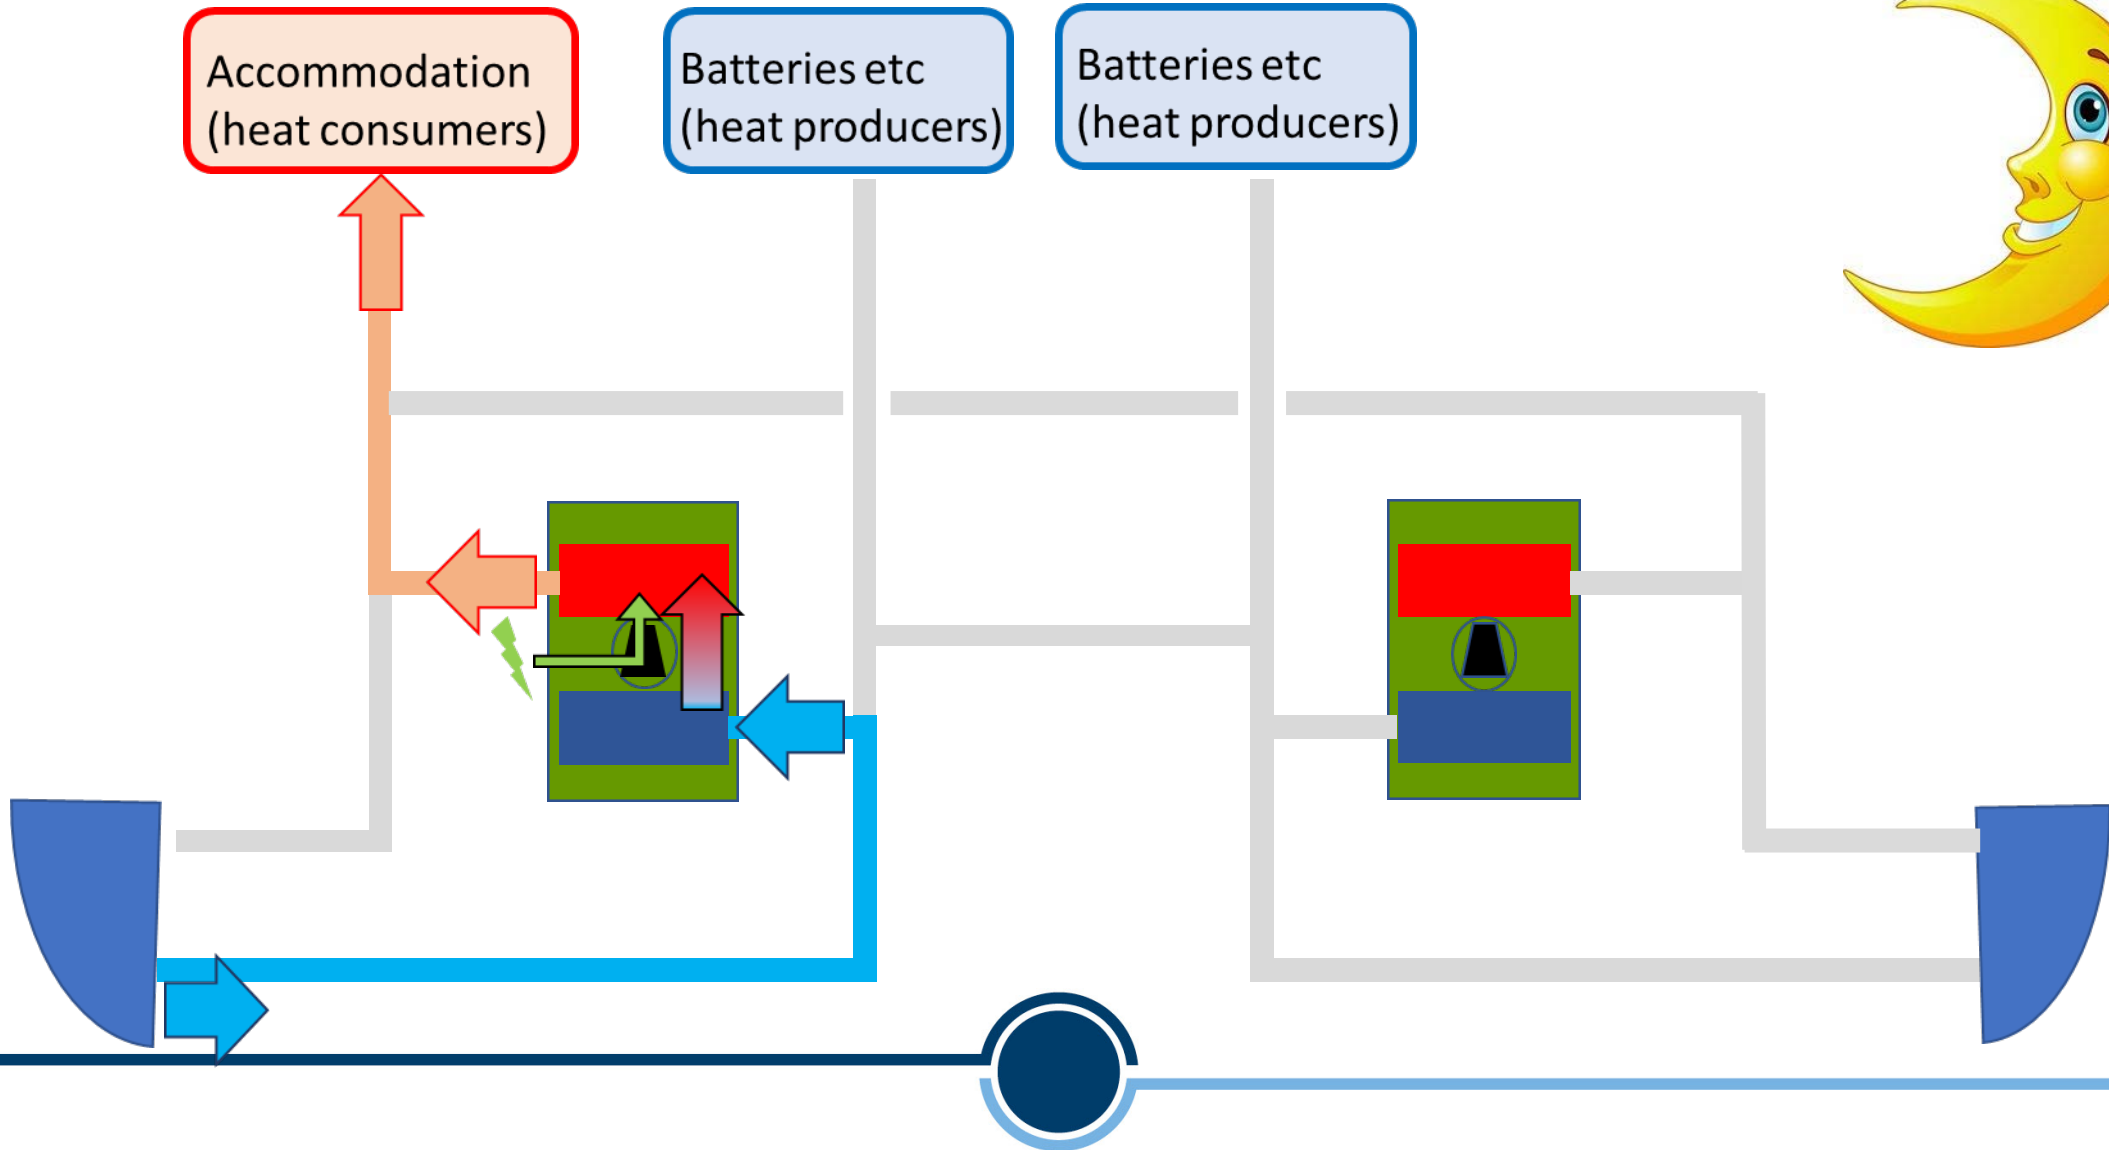

Tank with PCM
1500 liter
500 kg ATE36
~30 kWh

Energy flow - Day operation

Energy flow - Night operation

- Start
- AC1 Crew & Wheelhouse
- Wheelhouse
- AC2 Passengers Area
- Technical Fans
- Engine Room Fans
- WEMS FWD Cooling Water
- WEMS AFT Cooling Water
- WEMS FWD Heating Water
- WEMS AFT Heating Water
- WEMS Sea/Fresh Water
- WEMS Settings

WEMS FWD COOLING WATER

Mode 1.3.2b

Sea water used for cooling return chilled water, but sea water temperature is too high to reduce return water sufficient. Rest cooling done in evaporator. Heating required in accommodation, but more than produced by the HP due to cooling demand. The ratio of free cooling should be reduced to inc

Off Auto **Master** Stand by

HP-01

Remote Running Alarm Standby

Discharge 10.3 bar 2.0 bar

Suction 2.18 bar 2.18 bar

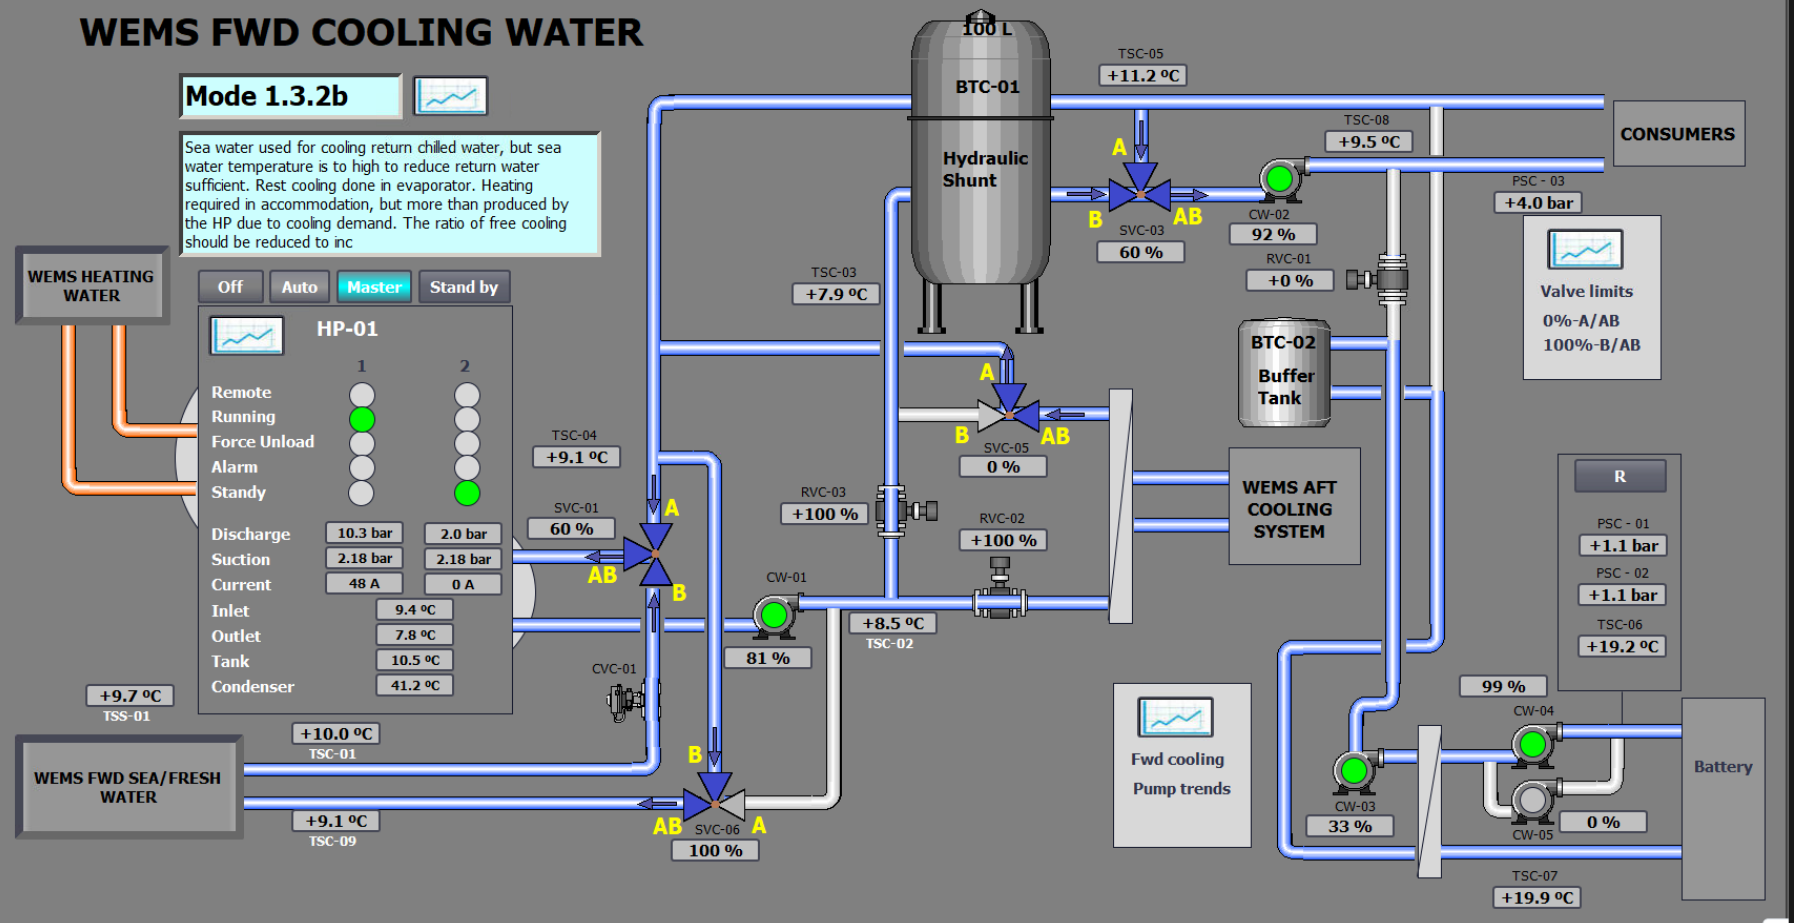

Current 48 A 0 A

Inlet 9.4 °C

Outlet 7.8 °C

Tank 10.5 °C

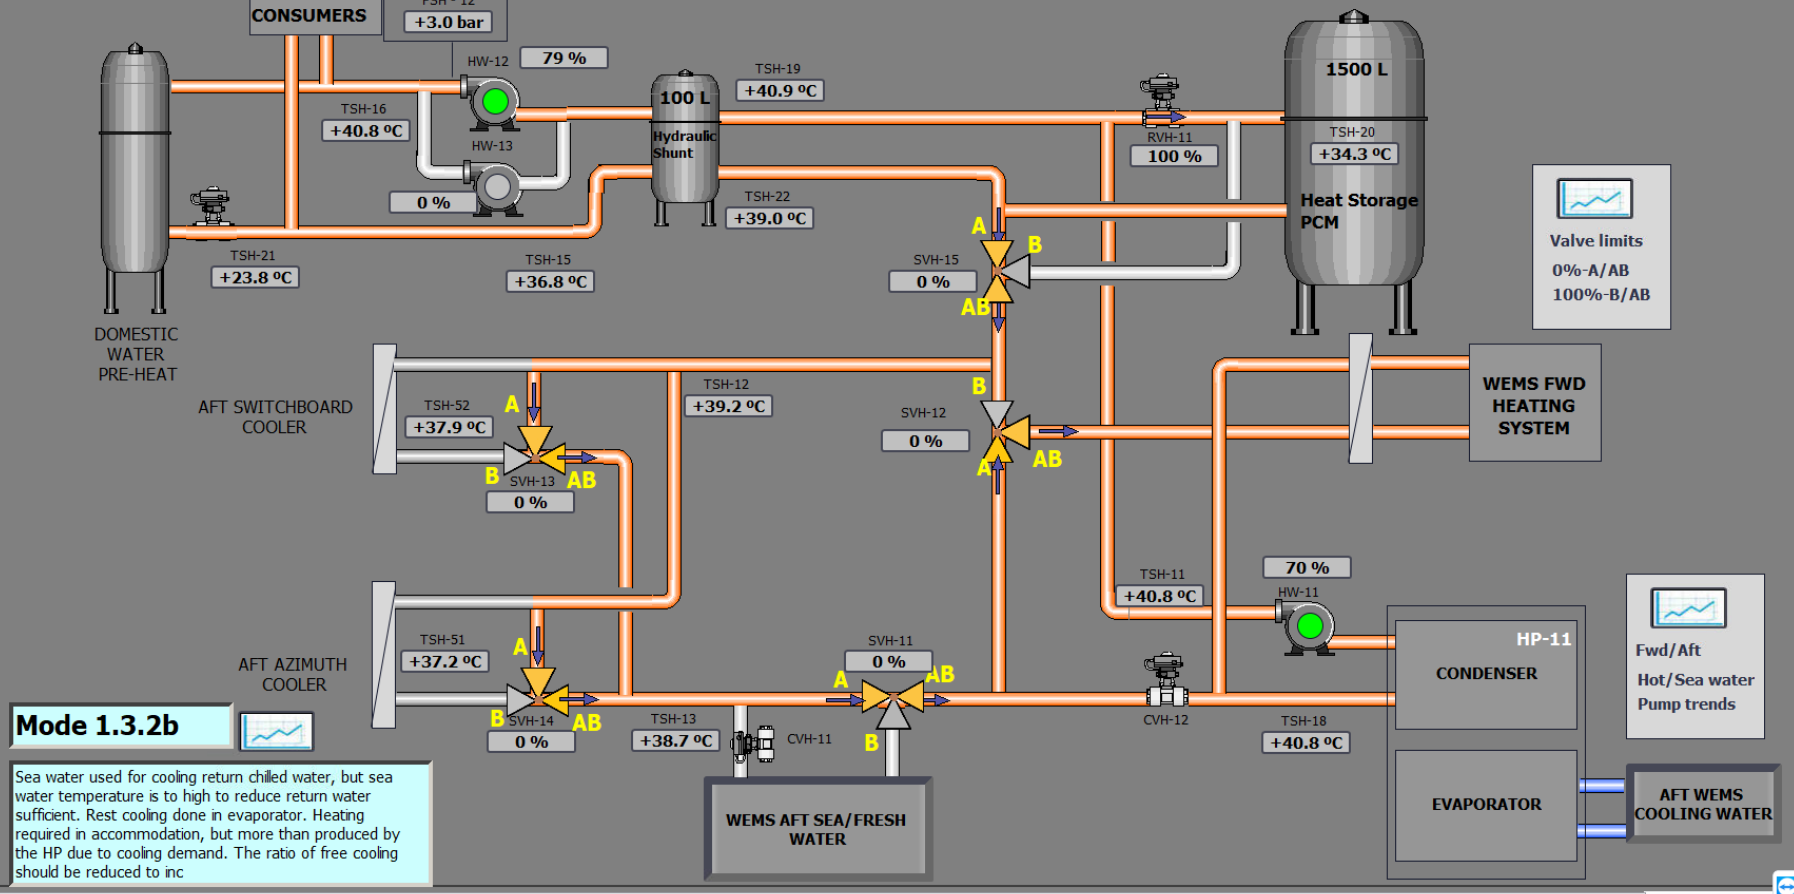

Condenser 41.2 °C

ALARMS

- Start
- AC1 Crew & Wheelhouse
- Wheelhouse
- AC2 Passengers Area

WEMS AFT HEATING WATER

Tustna/Grip

Challenges

- Delayed onshore infrastructure
- Heat load at night
- Sensor location
- Short circuits on sea water side
- No real test of unloading PCM
